- You have to make structural figure and table with your hands
- Write down the selected layers and functions
- And explain how they work, **respectively**
- Each block must be described

## SOURCE CODE #3

- A CNN Code that can be used as an example will be published
- Comments are also required and explain process of forward and back propagation
- Explain with an example how an image example is transformed when forwarding
- Describe **how and why** you chose mini-batch, epoch, loss function, optimization function, and so on

## SOURCE CODE #3

- Example It is essential to implement ResNet20 based on CNN Code to increase accuracy : 75%
- Based code parameter
  - Image preprocessing
  - Batch size
  - Deep learning hyper-parameter
  - Epochs
  - etc
- Modify parameters to improve accuracy and report that.

# RESULTS AND PLOTS #4

- Experiment with **modifying hyperparameters** and measure accuracy
- Explain the results through a visible **plot**, such as a confusion matrix
- **Discuss why** such results came about

# POINT ALLOCATION

- **Code score – 40 points**

Quantitative evaluation

- **40** – Top 15 accuracy model
- **30** – Works well
- **20** – Works

- **Report score – 60 points**

Qualitative evaluation

- **60** – Excellent
- **45** – Good
- **30** – Fair

- 10 points if report description is insufficient
- Code copy is not allowed among students

- Additionally, the score may be deducted

**Split Dataset: Training 80%, Validation 10%, Test 10%**

**Measurement Criteria: Accuracy, F1-score (the average of ten trials)**
